

Testimonial

Mar 11th, 2024

It has the advantage of being very light, about 50% lighter than silicon, so the feeling of wearing the material is absent.

It can be firmly attached to the surface of dew and muscle tissue, skin tissue can also stick to the surface of Surgiform, is stable and does not worry about displacement.

Does not create a sheath, does not shorten the tip of the nose. The choice is yours but I will always choose Surgiform first.
